

# EU-TAXONOMY WITHIN EUROPE

# What works well across borders and where are the main differences?

Climate change  
adaption

Sustainable use and  
protection of water and  
marine resources

Transition to a  
circular economy

Pollution prevention  
and control

*The documentation process runs smoothly when the requirements are consistent.*

- » Standards that have been implemented uniformly within the EU
- » Documentation based on the certification system (DGNB)
- » Specifications and limit values according to the regulation
- » Soft criteria

# What are the key pain points and why is it important to foster a uniform approach?

Climate change  
Mitigation

Sustainable use and  
protection of water and  
marine resources

Protection and  
restoration of biodiversity  
and ecosystems

- » National definition of a NZEB
- » Structure and calculation method of EPCs
- » Assessment of land in rezoning procedures

*National interpretations of EU-legislation lead to deviations in requirements and documentation and thus lead to uncertainties.*

# Call for close collaboration and consistent requirements...

- » Avoidance of ambiguities in all criteria
- » Avoidance of differing evidence within a company
- » Comparability of evidences within the EU
- » Promote transparency
